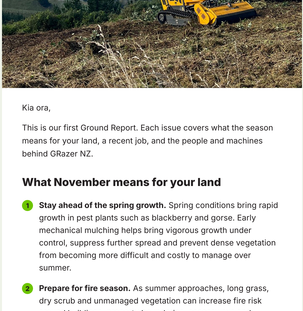
GRazerNZ
Mulching & Land Clearing Specialist

THE GROUND REPORT
News, machinery and updates from GRazer NZ

Clear your land, mulch unwanted vegetation



Kia ora,

This is our first Ground Report. Each issue covers what the season means for your land, a recent job, and the people and machines behind GRazer NZ.

What November means for your land

1. **Stay ahead of the spring growth.** Spring conditions bring rapid growth in pest plants such as blackberry and gorse. Early mechanical mulching helps bring vigorous growth under control, suppress further spread and prevent dense vegetation from becoming more difficult and costly to manage over summer.
2. **Prepare for fire season.** As summer approaches, long grass, dry scrub and unmanaged vegetation can increase fire risk around buildings, property boundaries, accessways and infrastructure. Proactive mowing and mechanical mulching provide effective fuel reduction, help maintain clear access and improve site conditions ahead of the hotter, drier months.
3. **Get your site summer-ready before the Christmas break.** With many businesses operating reduced hours or closing over the holiday period, now is the time to get ahead of seasonal growth. Scheduled commercial mowing and vegetation management help keep grounds, accessways, boundaries and open areas maintained while your site is quieter, reducing the chance of returning in January to overgrown conditions and a backlog of work.

Meet the fleet

We have your ground covered.

BEA | High-output mowing
Hustler, 104-inch deck

- 104-inch commercial mowing deck for large areas.
- Efficient coverage across open commercial and industrial sites.
- Rear-discharge mowing for a consistent, tidy finish.

CONNIE | All-terrain mulching
McConnel Robocut T400

- Compact 1.5-tonne tracked machine with specialist mulching and flail heads.
- Access through tighter areas from approximately 1.4m wide.
- Capable of working on slopes up to 55°.

FAE | Heavy-duty forestry mulching
FAE RCU-55

- 2.6-tonne remote-controlled forestry mulcher.
- Handles dense vegetation, scrub and woody growth up to 200–300mm, depending on conditions.
- Operates on slopes up to 55°, keeping the operator off the machine.

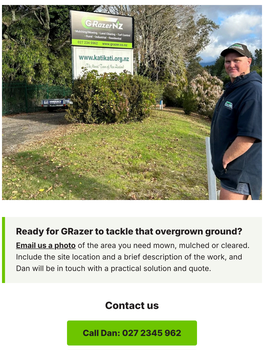
Three specialist machines.
Three distinct capabilities.
One integrated vegetation management service.

From sprayed gorse to ground ready for planting

Following initial vegetation treatment, GRazer NZ undertook mechanical mulching to break down the standing gorse and bring the area into a more manageable condition.

Using our FAE RCU-55 remote-controlled forestry mulcher, we can work across challenging terrain and steep slopes of up to 55°, keeping the operator off the machine and at a safe operating distance.

The mulching work has improved site access and helped prepare the area for its next stage, with planting now proceeding.



Specialist machinery. Experienced operators. Practical mechanical vegetation management.

Introducing James

We are pleased to formally introduce James following the successful completion of his operator cadetship with GRazer NZ. After 18 months of hands-on experience, James is now operating independently and as an integral part of our operations team.

He is also progressing into the next phase of his development, focusing on quoting, pricing, commercial decision-making and building his understanding of the business operations. This progression reflects our commitment to developing skills and capability within the business.

James (left) and Dan (right)

Home base: Katikati

Our Katikati yard opened in April 2026, providing a dedicated home base for our machinery and operations.

From Katikati, we service commercial, industrial, civil and rural properties throughout the Bay of Plenty and across the North Island.

With specialist machinery, experienced operators and a practical approach to planning and scheduling, GRazer NZ delivers mechanical mowing, mulching and vegetation management to suit the demands of each site.

Ready for GRazer to tackle that overgrown ground?

Email us a photo of the area you need mown, mulched or cleared. Include the site location and a brief description of the work, and Dan will be in touch with a practical solution and quote.
